Welcome Message

Dr. Ashish Joshi
Ph.D. MBBS MPH

Welcome to the eighth issue of the Nutrition Informatics newsletter SHINE (August 2022) of the Foundation of Healthcare Technologies Society. This newsletter aims to bring together the advancements in the field of Nutrition Informatics Research, Innovation, Policy, Practice, and Entrepreneurship. The newsletter will also provide recent updates about the various national and International nutrition informatics projects, and highlight some of the major nutritional challenges that can potentially be solved through various nutrition informatics interventions using data, information, and knowledge frameworks. We also highlight some of the student successes in the field of nutrition informatics research and practice. In addition, we bring together stories of the student's learning experience with the real nutrition informatics projects addressing real public health challenges. I encourage you to make a meaningful contribution to this newsletter by sharing data-driven, evidence-based ideas, innovations, and interventions that aim to address nutritional challenges impacting health among individuals, families, and communities across diverse Indian settings.

Research Highlight

Title: Evaluation of quality and readability of diabetes-related online health information using DISCERN and Flesch-Kincaid Tools

The study aimed to evaluate the quality and readability of diabetes-related online health information. Webpages were gathered by using the keywords “Diabetes mellitus”, “Diabetes mellitus causes”, “Diabetes mellitus diagnosis”, “Diabetes mellitus prevention”, and “Diabetes mellitus management” on Google. Previously validated DISCERN and Flesch-Kincaid Tools were used by the four raters to assess 37 unique websites. Overall DISCERN score (out of 80) for 37 included websites was 49.40 ± 5.83 denoting ‘fair’ quality of information. The .org websites were of good quality (52.2 ± 5.82). Sixteen websites had a good quality of information. Out of the 37 selected websites, only 14 (37.84%) of the websites had HONcode labels. The mean FRES was 44.80 ± 11.53 . The mean FKGL was 10.48 ± 2.37 . The information available on the internet regarding diabetes was difficult to read and could be comprehended by individuals who achieved approximately US Grade 10th. There is a need for simplified and good quality online information which can help individuals, patients, and their caregivers make an informed decision.

Food & Mood

Eating is more than just eating; it influences our social interactions, emotional states, and even brain function. If you've ever found yourself mindlessly eating snacks in front of the TV after a bad day, or you instantly felt better on having a fresh bowl of fruit, it is because our food choices can mentally and emotionally impact on our moods, and vice versa. This bidirectional relationship between food and our mood is mind boggling.

The connection between nutrition and mental health has received a lot of attention in recent years. Improving one's diet may help protect not only one's physical health but also their mental health. Poor nutrition may be a contributing factor in the consistent experience of low mood.

Mood's Impact on Food Choice

Moods are long-lasting emotional states that we experience. Changes in food preferences or choices in response to our temporary psychological state, such as "comfort foods" in times of depression or changes in appetite due to stress, are common human experiences. Our moods can influence our food choices in a variety of ways. As a result, when we are stressed or in a generally bad mood, we tend to seek out foods that give us pleasure. Personal preferences will vary, but many people enjoy processed foods with lower nutrient density.

Food's Impact on Mood

At the same time, the foods that we choose to put into our bodies can have significant impacts on our mood. Thankfully, we can use this to naturally combat certain moods and help treat mental health concerns. Let us look at how nutrients affect the mood.

Launch of Second Batch Soon

Certificate Program in Health And Nutrition Informatics

[For information - Click Here](#)

Joint collaborative certificate program of Foundation of Healthcare Technologies Society and St Ann's College for Women. There is a growing opportunity to facilitate technology-enabled behavioral change interventions to support NI research and practice. The program adheres to UGC-approved guidelines and combines theoretical aspects with the presentation of practical solutions in real-world settings.

16weeks Program Duration	240hours Total teaching hours	16hours Online live lectures	32hours Discussion forum / mentoring
40hours E-tutorial	40hours E-content	40hours Self-study hours	8credits Total number of credits
Learning objectives <ul style="list-style-type: none">• Organize and manage health information data.• Maintain quality, accuracy and accessibility of data.• Ensure the security of electronic and paper filing systems.• Use data collected to help create dietary plans for patients.• Apply human centered approach to design culturally and contextually relevant nutrition apps supporting improvement of population health outcomes.• Evaluate nutrition informatics interventions across diverse disease topics, diverse populations across various settings.

Spotlight

Priyamvada Patancheru

I heard about this course from my lecturer. After attending the orientation webinar I have decided to enrol on this course. This Health and Nutrition Informatics Course have helped me to gain additional knowledge.

I have learned many things like how to design and develop nutrition informatics interventions, m health and nutritional apps, formulating a research question, research methodology, scientific writing and many more. This course has helped me a lot to gain knowledge and will be useful in my future research work. I would thank every lecturer and mentors who helped me to gain knowledge in this course.

Upcoming Events

SMAART IMPACT HACKATHON - TECHNOVATION CHALLENGE

FHTS is organising a SMAART IMPACT Hackathon event on 17th September 2022 from 8:30-10:00 AM (IST). It is a platform for participants to highlight the most prominent and recent trends, data and digital solutions on “**Nutrition Confusion, tackling the Infodemic**”.

Everyone is welcome to participate, be it students or professionals as an ATTENDEE or PRESENTER from all walks of life!

Get your thinking caps on and be part of this enduring experience!!!
